## Sheep anti-human herpes virus 8 cyclin (HHV8 cyclin)

**Product:** Anti-human herpes virus 8 cyclin (HHV8 cyclin) polyclonal antibody.

**Description:** Human herpesvirus-8 (HHV-8) cyclin is a component of the HHV-8 virus particle. HHV8 has been found to be associated with three different diseases observed in AIDS patients; kaposi's sarcoma, primary effusion lymphoma (which is a rare type of non-Hodgkin lymphoma affecting the body cavities) and multicentric Castleman's disease. To date there is much evidence to support a direct role for HHV8 in kaposi's sarcoma.

**Applications:** Immunoblotting 1-5 ug/ml. Immunoprecipitation 10-20 ug/ml.

**Formulation:** Provided as 0.2µm sterile filtered solution in phosphate buffered saline with 0.08% sodium azide.

**Presentation:** 250 µg IgG purified.

**Reactivity:** Human

**Storage:** Antibodies should be stored at -20°C. Aliquot to avoid freeze/thaw cycles.

**Stability:** Antibodies are stable for one year from purchase if stored frozen.

<b>Ordering Information:</b>	<b>Form</b> Purified	<b>Vial Size</b> 250 ug	<b>Catalog #</b> F105P
